

Schedule CL
COMMERCIAL LIGHTING PROGRAM

I. PURPOSE

The purpose of the Commercial Lighting Program is to provide nonresidential customers with a one-time incentive per project to encourage customers to install new, or replace existing, lighting systems with high efficiency lighting systems. In turn, the upgrade will potentially reduce the participant's total energy bill. Additionally, the energy required on the Company's system will be reduced, while also decreasing the Company's need for capacity during peak periods.

II. AVAILABILITY

This Program is available to nonresidential customers in the Company's service territory who install, or replace existing lighting equipment with high efficiency lighting systems. Participation in this Program is strictly voluntary. Customers who opt out of the DSM/EE Programs cannot participate.

The Program requires the work be completed by a licensed contractor who has registered with an established pre-qualified vendor network or through self-installation. The contractor network assists the customer with identifying potential contractors to complete the installation of a new lighting upgrade. All installations rebated by the Company are subject to on-site inspection. All installations over \$10,000 in rebate value or self-installed will be inspected.

III. LIGHTING UPGRADES

The approved lighting upgrades include, but are not limited to:

- Incandescent to CFLs;
- T12 to T8 or T5; and
- High bay fluorescents and pulse start metal halide lamps for warehouses.

IV. INCENTIVE PAYMENTS

The Program pays each participant an average one-time incentive equal to 50% of the incremental cost of installing an approved lighting system. The average incentive will vary

IV. INCENTIVE PAYMENTS (Continued)

depending on the specific lighting upgrades. In subsequent years the incentive will be adjusted for inflation.

Upon receipt of a completed Rebate Application, DNCP will process the completed application, confirm or inspect the installation of the high efficiency equipment, and forward the incentive payment to the customer within 45 days, unless the customer requests the payment go to the contractor. The Company reserves the right to withhold any rebate payment until customer has satisfactorily completed the application process.

A complete list of rebates by equipment type is available online at www.DomEnergyConservationPortal.com.
